

“Enviro Mist” system will help solve all environment heat related problems

How It Works :-

In it's simplest form, "Enviro Mist" system incorporate a high pressure pump and a spray nozzle designed to produce water droplets smaller than the diameter of a human hair, even as small as 5 microns (5 millionth of a meter). When water droplets this small hit the surrounding air they "flash evaporate," reducing surrounding temperatures as much as 5 degrees Celsius. The scientific principle of misting, known as thermal dynamics, ensures that a blistering outdoor environment can be transformed into a comfortable and pleasant experience. When utilizing "Enviro Mist" system within an enclosed environment, such as a greenhouse, potato storage shed, wine storage facility, clean room assembly, etc. High humidity levels can be achieved without excessive moisture ever reaching the ground. These characteristics make "Enviro Mist" system a safe and cost effective alternative to other more hazardous and expensive methods of humidification.

Application :-

"Enviro Mist" system can be use for home patio, garage cooling, pet cooling, restaurants , office fountain, plants, nursery, greenhouses, food storage, industrial cooling and humidification application, deodorizing , wine barrel storage facilities, textile and lumber factories, passenger bus stop and train station and many more usages with the demands of the consumer who wants the best in an outdoor cooling and indoor humidification.

Sales & Rental Of Environment Mist Cooling System
